

Green Infrastructure Practices:

Practices that use natural processes to manage stormwater and improve environmental quality in urban areas. These include ***rain gardens, native plants, green roofs***, and the practices listed below. Consider incorporating 1 or more of these practices into your yard.

Facts for the below can be found at the QR code site.

- Vegetated Swale
- Bio infiltration
- Flow-Through Planters
- Urban Street Trees
- Pervious/Permeable Pavements
- Vegetative Detention Basin
