Evansville WATER AND SEWER UTILITY

December 23, 2013

Cross Connection Control
(Backflow Prevention) Notification

Dear Backflow Preventer Tester,

The City of Evansville contracted with Aqua Backflow to manage its cross connection control/backflow program. Aqua Backflow will track all backflow preventers, contact Evansville water customers when backflow testing is due, and will also educate them of the new procedures and online tracking program.

Beginning February 1, 2014 all backflow test results shall be submitted online at www.TrackMyBackflow.com. Paper copies of test results will no longer be accepted. A filing fee of $9.95 per submission will cover administrative as well as other costs of the IDEM mandated program. Payment must be made upon completion of online test result submissions. Please register with us as a licensed tester for free at the above website as soon as possible. Once registered, you will be issued a user name and password.

Up to and through January 31, 2014, please mail, fax, or email your test results to Aqua Backflow's offices. On and after February 1, 2014, test results should be submitted online. Online data entry is performed by simply entering the backflow assembly serial number and building number (address) OR entering only the Hazard ID #. Hazard ID tags are mailed to all water customers when a test is due. Please hang that tag on the backflow preventer if the customer has not already done so. Note that the Hazard ID # never changes! Be sure that tags remain in place at each hazard and write the Hazard ID # on your test forms for future reference.

If you have questions or need further information, please visit Aqua Backflow's websites, contact Aqua Backflow at (866) 777-2124, or email info@AquaBackflow.com. Thank you for helping to protect Evansville water!

Sincerely

Tom Staroske
