

HOW DOES THOUSAND-GALLON BILLING WORK? SEE THE EXAMPLES BELOW.

FAMILY OF THREE

Leanna's family uses 5,600 gallons of water in January. Since we bill in thousand-gallon increments, we round down to 5,000 on her monthly bill. In

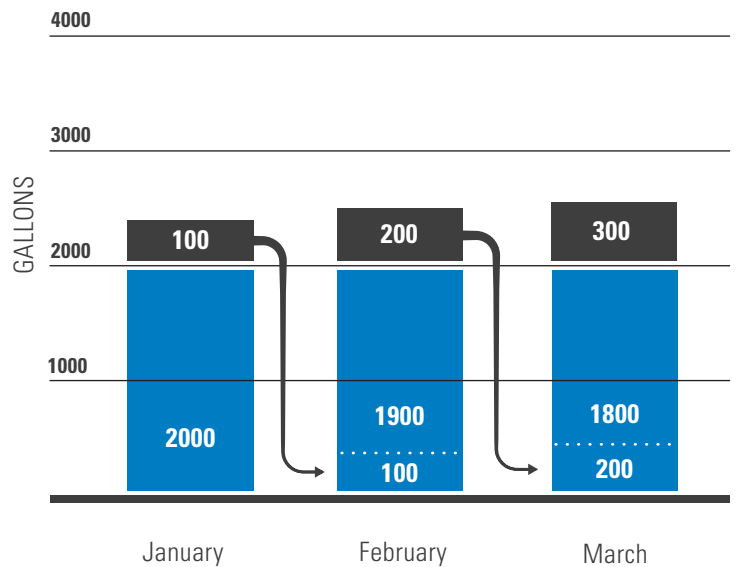

February, Leanna's family again uses 5,600 gallons. But we've rolled over those extra 600 from January, so her total usage is 6,200 gallons. Just like last time, we round down for her monthly bill. She is charged for 6,000 gallons. The extra 200 will be added to March. Leanna's family uses 4,800 gallons in March, creating an even bill for 5,000 gallons.

SINGLE PERSON

Damien lives alone and uses 2,100 gallons of water in January. We round down to 2,000 on his monthly bill. In February, Damien again

uses 2,100 gallons. Even with the rolled over 100 from January, we are still rounding down, so he receives a bill for 2,000 gallons again. Because we round down, Damien won't pay a higher amount until the rolled over gallons add up to 1,000. Since Damien uses 2,100 gallons each month, he sees less frequent changes in his bill than Leanna.

Billable that month

Extra carried over to following month
